# Starfall Kindergarten Math Assessment Overview 

The Starfall Math Program challenges and engages children. The curriculum "spirals" which provides children with the opportunity to revisit concepts and strengthen their understanding. Starfall assessments provide useful information which enable you to guide, adapt, and differentiate instruction to meet each child's individual needs.

The assessment component of the Starfall Math Program includes:

## Entry Assessment

The entry assessment establishes a baseline for each child, and should be administered during the first few weeks of the school year. Children may be periodically reassessed in any area not mastered on the entry assessment before administering the mid year assessment. Children who master all areas of the entry assessment may also be given the mid- year assessment at the beginning of the school year.

## Mid-Year Assessment

The mid-year assessment is extremely valuable. It allows the teacher to determine which children are on or above grade level, and which children need academic interventions. For children needing review and reinforcement, small math groups and one-on-one instruction are beneficial.

## Exit Assessment

The end of the year assessment concludes the Starfall math year. This assessment helps you to evaluate your instruction, and provides you with data regarding the children's understanding of the concepts taught.

## Summative Assessments

Summative Assessments are conducted each week during Learning Centers on Day 5. These assessments provide ongoing evaluations of the skills and concepts presented during the unit. The Summative Assessments are directly related to the standards.

## Formative Assessments

Formative assessments are included at the end of each lesson. The goal of the formative assessment is to monitor children's learning and to provide ongoing feedback. More specifically, formative assessments target areas that need additional practice, and help the teacher recognize areas in which children are struggling, and address those areas immediately.

Directions: Show a Shape Picture Card to the child. Instruct the child to say: I know this is a because . The child fills in the blanks by naming the shape and its attributes. For example:
I know this is a triangle because it had 3 straight lines and 3 angles. Repeat for each shape.
